

Week 3: Data Visualisation

Please download the “lab3_DataVis.ipynb” and the accompanying Data.zip file. It contains the needed data files in the python notebook. I tried to add as much documentation as possible and update the code and the data files, however the weather data file is dummy valued, and the regular expression code produce an error. Might be a good exercise to debug, I will try to revisit later if possible but suggestions are welcome to regenerate the weather chart of the book.
